

Environmental Policy Statement of Reflex Studio Ltd t/a Reflex Printed Plastics

2nd January 2020

Reflex operates from a modern yet sympathetic, purpose-built premises, occupying a 17 acre site on the picturesque Kent/Sussex borders near Tunbridge Wells. We have long been aware of our environmental responsibilities to both our beautiful countryside and the print industry. Reflex's building has been constructed to be aesthetically sympathetic to the environment and energy efficient whilst being serviceably efficient.

Whilst ensuring that any form of pollution is prevented, and that compliance with all legislation and other requirements is maintained, we are also committed to continually improving our environmental performance across a range of aspects. To accomplish this Reflex will;

- Strive towards a paperless office environment.
- Utilise energy saving modes on PCs etc.
- Ensure that lights are turned off when not necessary and when the building is vacated.
- Make efficient use of paper and ensure all waste paper is recycled
- Ensure that all plastic waste created is recycled or re-purposed wherever possible
- Ensure that printing machines are used optimally to prevent unnecessary power up surges and consequently higher power consumption

Where achievable, objectives and targets will be set to ensure that improvements can be measured so as to evidence continuing improvement.

This policy is facilitated by operating an Environmental Management System that meets the requirements of ISO 14001:2015 and which is subject to periodic review.

This policy is communicated to all personnel working for or on behalf of Reflex and is made publicly available for the benefit of all stakeholders

Antony Jones
Managing Director
